

The **Endo** Educational
Organization of Canada

Resource Library: Endo Queer Facebook Group

This Facebook group is a space for LGBTQIA+ individuals with Endometriosis. Too often endometriosis is referred to as a disease only affecting "women," although this is not true. Endometriosis affects a variety of individuals (cis, trans, non-binary, etc.) including individuals with AND without female reproductive organs.

We support this resource because EndoQueer provides a safe area for LGBTQIA+ individuals who are affected by endometriosis to discuss their experiences without malicious and uneducated judgement from others. Endometriosis affects a much larger scale of individuals than dominant global culture has led us to believe; a detail that is overlooked too often. We need more spaces like EndoQueer wherein individuals within the LGBTQIA+ community are able to freely express their experiences with endometriosis, access inclusive educational resources and ultimately be able to experience a better quality of life.
